

1. (10%) List 7 steps of a compiler process. Which of them are machine independent ? Which of them are machine dependent ?

2. (10%) For the following NFA, find the corresponding DFA with the minimum number of states.

3. (10%) Reduce the following transition table.

|        |          | Input symbols |   |   |      |            |
|--------|----------|---------------|---|---|------|------------|
|        |          | +             | - | . | d    | $\epsilon$ |
| States | S        | A             | A |   |      | A          |
|        | A        |               |   |   | B, C | E          |
|        | B        |               |   |   | B    | F          |
|        | C        |               |   | D | C    |            |
|        | D        |               |   |   | D    | F          |
|        | E        |               |   | G | E    |            |
|        | <b>F</b> |               |   |   |      |            |
|        | H        |               |   |   | H    | F          |

4.(10%). Is the following grammar LL(1) ? Explain why ?

$S \rightarrow Ab$

$A \rightarrow a$

$A \rightarrow B$

$A \rightarrow \epsilon$

$B \rightarrow b$

$B \rightarrow \epsilon$

5. (20%) Lab.

請用“簡短的”敘述回答以下問題（寫出重點即可，不需寫得太複雜）。

- (1) 在 Lex 中你如何定義代表加減乘除(+\*/)的 token，請寫出其 Regular Expression?
- (2) 在 lex 中，被 regular expression 辨認出來的 token 會存放到哪個變數中？
- (3) 在 lex file 的 rules part 中，如果定義了表示 reserved word 以及 identifier 的 token 的話，你要怎麼避免 scanner 不會將 reserved word 判斷成 identifier?
- (4) 你如何處理規格書中沒有定義的字元(例如 # )？
- (5) 你如何判斷一個字串超過 30 個字？

6. (10%) Suppose that a grammar has the following productions:

$S \rightarrow aBc$

$B \rightarrow bXb$

$B \rightarrow bX$

$X \rightarrow a$

$X \rightarrow ab$

(a) Is the string "ababc" in the language generated by the grammar?

(b) Is the grammar ambiguous? Justify your answer.

7.(30%) For the following grammar:

$\langle E \rangle ::= \langle T \rangle \langle E' \rangle$

$\langle E' \rangle ::= + \langle T \rangle \langle E' \rangle \mid \epsilon$

$\langle T \rangle ::= \langle F \rangle \langle T' \rangle$

$\langle T' \rangle ::= * \langle F \rangle \langle T' \rangle \mid \epsilon$

$\langle F \rangle ::= (\langle E \rangle) \mid id$

(a) Find First and Follow sets (for each nonterminal symbol). (10%)

(b) Create its parsing table. (10%)

(c) Shows the move made by predictive parser on input  $id + id * id$  (based on a stack).

(10%)
